one cubic centimeter of the pertinent filtrate prepared at Dresden yielded 2,000 units of penicillin, while the corresponding quantity of filtrate in Jena yielded only 1,200 units

25X1

Nevertheless, the production of penicillin in Jena was more practical than the processing method in Dresden was more wasteful.

3. The preliminary production target of 200 kg of streptomycin suggested by the management of Jenpharm for 1955 will probably be surpassed because production methods improved considerably in mid-1954. By early August 1954, the plant had a monthly capacity of 11 kg of streptomycin. This development was considered important in view of the general expenses of the streptomycin plant, which, allegedly amounted to about 500,000 eastmarks per month.

- 2 The total 1955 output of penicillin at all GDR plants is to amount to 4,000 billion international units. Of this quantity, the Jenapharm enterprise was to produce 280 billion units, the remainder was to be produced by VEB Arzneimittelwerk Dresden. A total of 1,000 units of penicillin produced at Jena was to be exported to China. The contracts for this transaction were to be concluded at the Leipzig Fair.
